Personal Statement

Passionate Master of Artificial Intelligence student and Software Engineer with hands-on experience delivering production-grade backend architectures. Deeply interested in leveraging intelligent system design, specifically neural-symbolic systems and Retrieval-Augmented Generation (RAG), to solve optimization challenges within industry-led projects. Seeking an industry placement to apply data engineering, database optimization, and software development disciplines.

Key Competencies

- **Problem-Solving & Optimization:** Optimized PostgreSQL schemas, reducing average API response times by 15% while strengthening global data integrity.
- **Technical Leadership:** Coordinated backend architecture for a 4-person team to secure 2nd place out of 20+ squads in the Cicada Hackathon, delivering a prototype ahead of schedule.
- **Attention to Detail:** Designed a full-stack apparel platform as a sole developer, executing strict system optimizations to achieve sub-2s load times across 100+ items.
- **Communication:** Facilitated a 4-hour web development workshop for 30+ students at Atria Institute, resulting in a 90%+ positive feedback rate.
- **Adaptability:** Formulated a real-time collaborative platform within a strict 24-hour deadline to win 1st place out of 65+ competing teams in the Beyonders Hackathon.
- **Applied AI & Retrieval Systems:** Engineered a RAG-based advisory agent grounding LLM responses in official NZ health data sources for accurate, citation-backed guidance.
- **Rapid Prototyping & AI-Augmented Problem Solving:** Won 1st at WDCC x FIGURED "The Code Muster"; individually earned the "Claude Whisperer" award for the best use of AI to dissect and solve the problem.

Education

Master of Artificial Intelligence <i>University of Auckland, NZ</i>	Mar 2026 – Current
B.E. Computer Science & Engineering <i>Atria Institute of Technology, Bangalore</i>	2021 – 2025 <i>CGPA: 8.17 / 10.0</i>

Work Experience

Freelance Backend Developer – Ito Master (www.itomaster.com) <i>Commercial E-Commerce Architecture</i>	Jun 2025 – Nov 2025
• Constructed an end-to-end commercial web application using Spring Boot, React.js, and PostgreSQL featuring secure user authentication, catalog pipelines, and payment integrations. • Executed data and platform optimization updates to maintain sub-2-second transaction load speeds across the store inventory.	
Junior Software Developer – Eruna Technologies Pvt Ltd, Bangalore <i>Workforce Management Domain</i>	Sep 2024 – Feb 2025
• Programmed Spring Boot RESTful APIs for a live workforce product, cutting manual processing time by 20%. • Overhauled monolithic services into a microservice architecture to enable independent deployment and scaling. • Optimized PostgreSQL database schemas and complex queries to maximize transaction efficiency.	

Projects

IMAC Advisor Agent – RAG-Based Health Information System <i>Independent Developer</i>	May 2026 – June 2026
• Built a RAG agent grounding responses in the NZ Immunisation Handbook, the national vaccination website, and other official NZ health resources for accurate, source-verified guidance. • Implemented a two-stage Bi-Encoder and Cross-Encoder retrieval pipeline with confidence scoring and PII redaction for safe, reliable output on real-world health queries.	
Role-Based Library Management System – Backend Build <i>Independent Developer</i>	Dec 2025 – Jan 2026
• Developed a robust CRUD framework using Spring Boot and PostgreSQL, securing data access paths through role-based access control policies and normalizing schemas to reduce data retrieval times by 30%.	
Personal Professional Portfolio – keth-portfolio.netlify.app <i>Frontend Build</i> – Responsive React JS and Node JS showcase of active engineering builds and hackathon prototypes, optimized for automated deployment pipelines.	Feb 2026

Achievements

- **2026 – Winner, WDCC x FIGURED "The Code Muster"** – Team awarded Best Solution (1st place); individually won the "Claude Whisperer" award for the best use of AI to understand the problem and engineer the solution.
- **2024 – Winner, Beyonders Hackathon** – Built a real-time collaborative platform in 24 hours (1st of 65+ teams).
- **2024 – Runner-Up, Cicada Hackathon** – Guided backend architecture for a 4-person team (2nd of 20+ teams).

Additional Information

- **Programming Languages:** Python, Java, JavaScript, SQL.
- **Specialist Knowledge:** Software Engineering, Web Development, Machine Learning, Artificial Intelligence, Retrieval-Augmented Generation.
- **Languages:** English (Full Professional), Kannada (Native), Hindi (Full Professional).
- **Interests:** Photography, Travel, Music, Cricket.
